

ABSTRACT OF THE DISCLOSURE

5 A method is provided of setting the voice personality of a voice service site. A user
browsing a voice web visits a voice site where the voice output of the site is presented
using a set of voice personality characterisers with which the user is particularly
comfortable. The user, in subsequently transferring to another voice service site, opts to
have the voice personality that was embodied in the set of voice personality characterisers
10 used by the site being left, transfer with the user to the new site. This transfer will typically
be subject to permissions set by both the site being left and the site about to be visited.
